For Dispatchers: Compression-only CPR for adults

Dispatchers are to provide instruction on chest-compression only CPR to ADULTS with suspected out of hospital cardiac arrest.

For lay rescuers: Compression-only CPR for adults

Compression-only CPR should be provided by lay rescuers to ADULTS with OHCA with or without dispatcher instruction! Ventilation can be considered for trained providers.

For professional rescuers treating adults: 30:2 ratio

For professionals, aim for 30 compressions to 2 breaths with or without interruptions for breaths. Those with advanced airways receive continuous CPR with 10 breaths/min.

For all rescuers: Ventilations matter in children

All rescuers should provide 30 compressions to 2 breaths if alone and 15 to 2 with a partner. Compression-only CPR is recommended only for those unwilling or unable to ventilate.
