

Buprenorphine/naloxone initiation and referral as a quality improvements intervention for patients who live with opiate use disorder

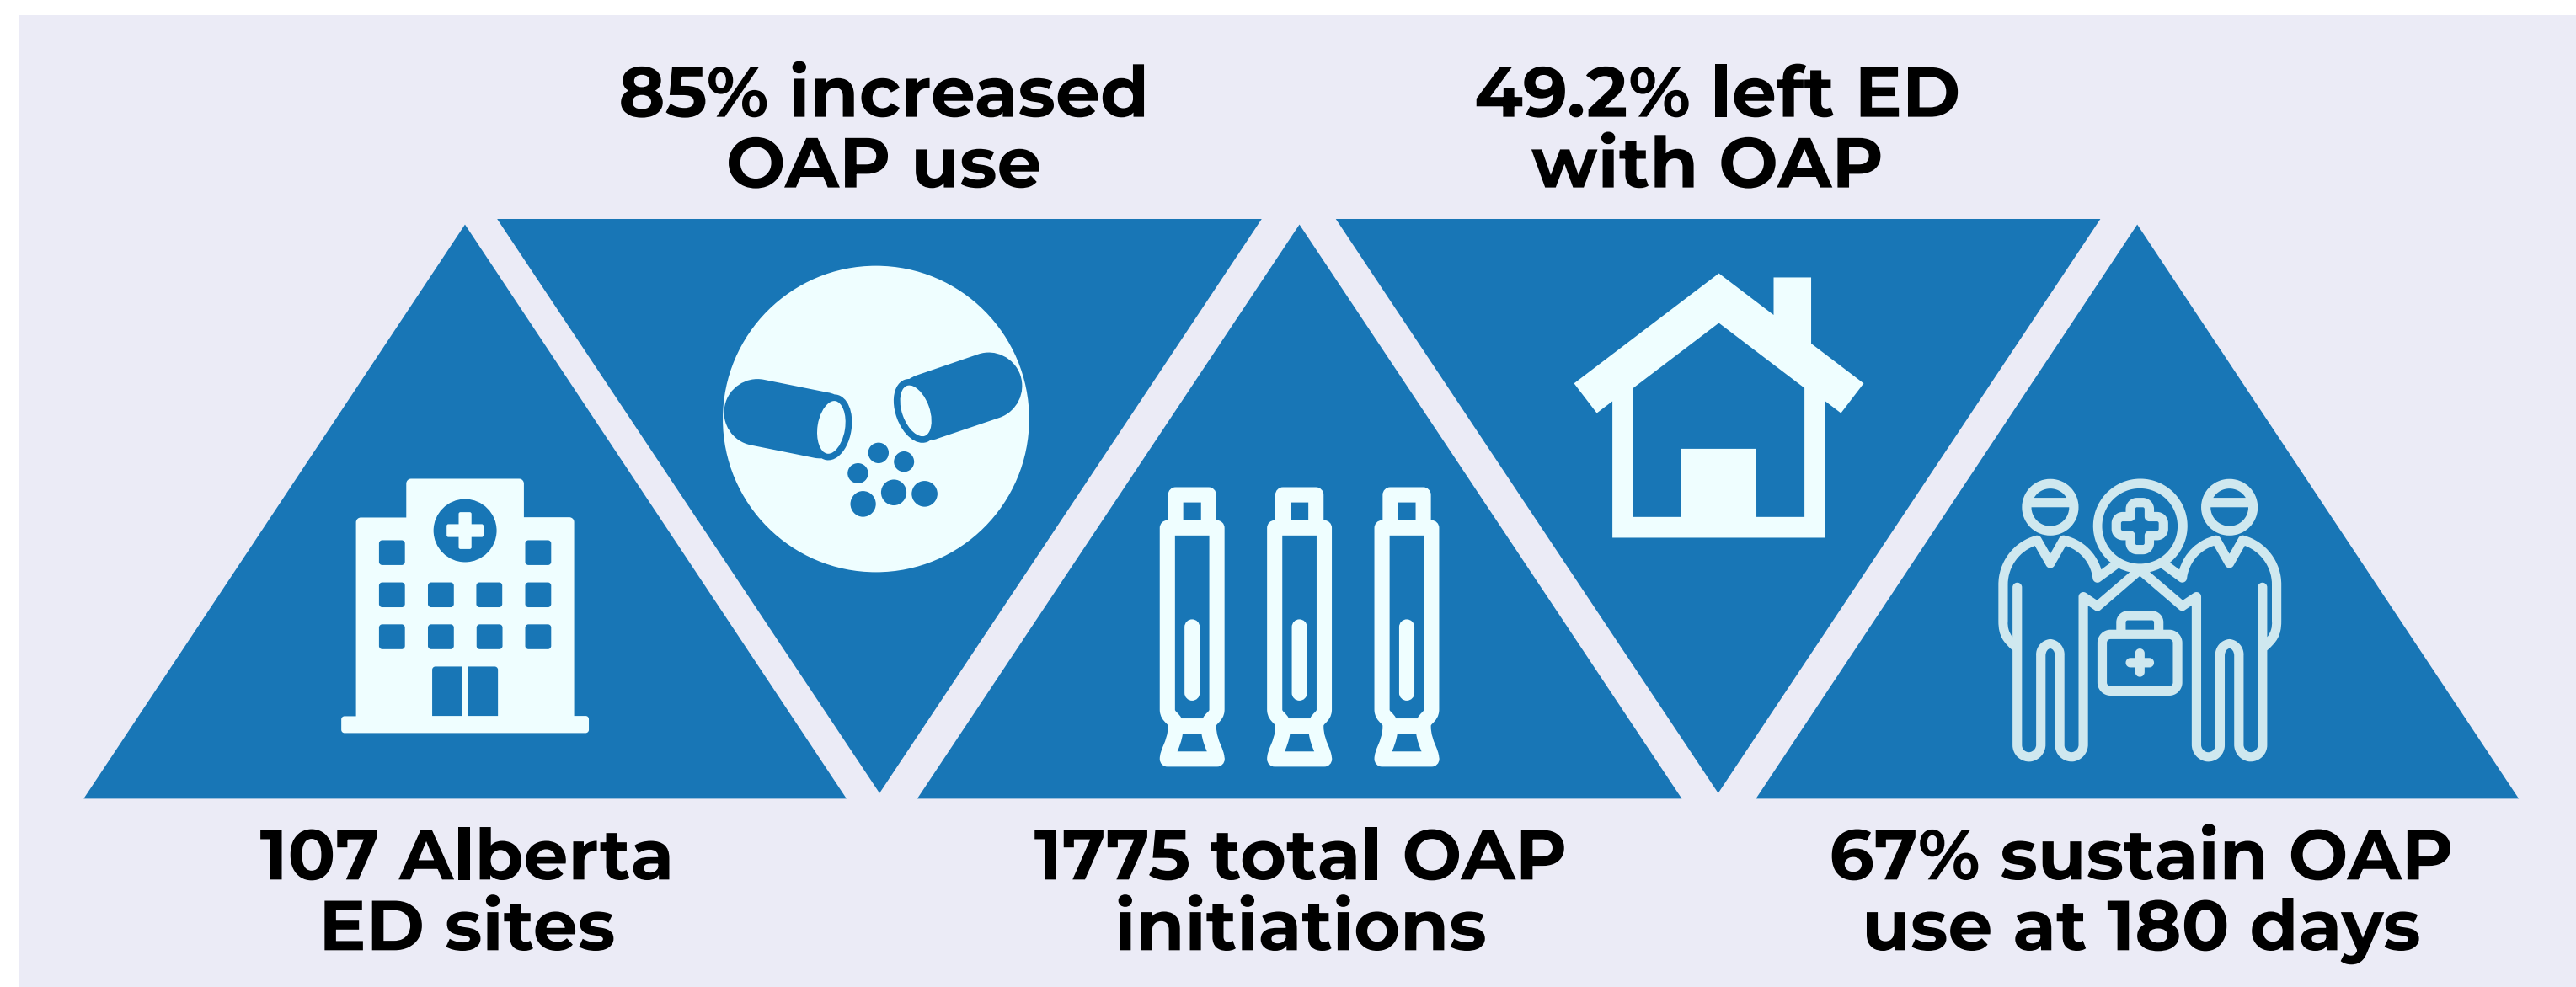

An opiate agonist program (OAP) expanded to 107 Alberta EDs in 2020

Most sites offered more opioid treatment after program initiation, and most patients initiated on treatment continued in treatment

This study evaluated:

program uptake, patient demographics, and outcomes

Take Home Message: Other jurisdictions may benefit from standardized programs to support OAT across multiple sites
